

Web Portal

VersaLex Suite

Business Partner Web Portal

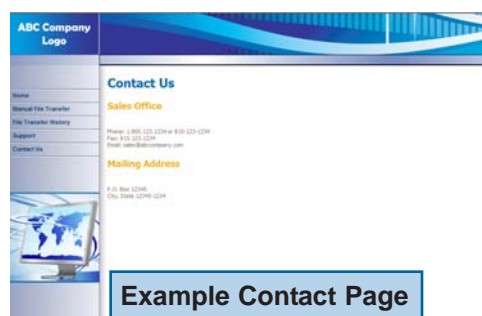

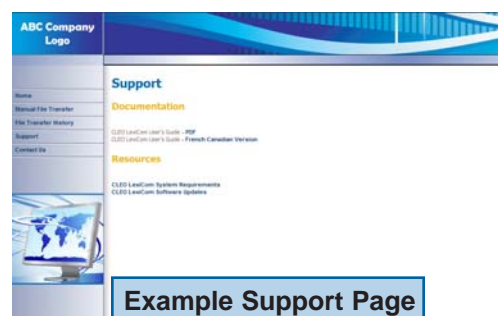

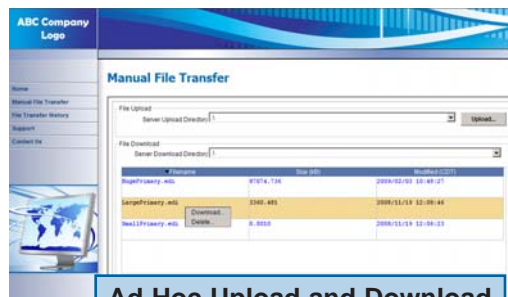

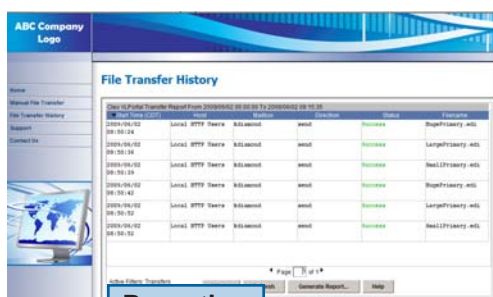

Successful partner enablement goes beyond the initial contact. VLTrader provides an easy-to-use and customizable web-portal to test and track transfers with partners throughout the business relationship. Provide low-tech or low-volume users with a manual transfer option and provide a back-up method for client-enabled partners. With only an Internet connection and a web browser, the web portal user can easily upload and download files to and from the VLTrader server, view pertinent file transfer history, and access any custom web pages that have been configured by the VLTrader administrator.

Customizable and Secure

The web portal is completely customizable by the VLTrader administrator. This includes controlling access to information and services. Provide access to employees, trading partners, customers, and others to the information pertinent to their areas of responsibility. Communicate important news and provide access to documentation and reporting. Provide a manual option for low-volume or low-tech partners via ad hoc upload and download without compromising back end integrations and automation. The VLTrader administrator can also customize the look and feel of the web portal to match the company's branding, in order to offer users a familiar experience.

Track File Transfers

Partners, employees, and others can easily track file transfers and acknowledgements via the web portal File Transfer Viewer. Users see only the file transfers that are applicable to their areas of responsibility. The system pulls the files from VLTrader so that all of the internal integration functionality is retained.

Features

- Login (user name, password)
