

Stream Network Fax

Don't spend your time chasing paper trails. Direct the information to come to you.
Automate. Send. Receive. Store. Track.

Traditional methods of faxing leave a lot to be desired in the realms of management, workflow and security. Paper costs, equipment costs, expensive toner, maintenance and trouble-shooting are time-consuming and costly. Businesses are taking a **closer look at streamlining workflows and reducing costs, while also enhancing scalability and growth.** There's no better time to look towards an enterprise solution that can do all of the above. Stream's Desktop Fax not only automates workflows, it centralizes them - bringing required security and compliance right to your desktop. Now, that's efficient.

If Email-to-Fax and Fax-to-Email aren't terms you're familiar with – they're ones you will want to get to know. It's time you **benefit from a green solution that integrates with any email system** and allows you to send and receive faxes as easily as sending an email, accomplishing more right from your desktop. Efficiency is only the beginning.

Numerous regulatory **compliance standards like HIPAA, FERPA and SOX** require organizations to track and monitor users, senders and recipients of private information to complete the audit trail. Stream Fax allows you to route faxes to a secure network folder, web page or document repository with immediate notification of delivery. Once a fax is stored, it remains easily accessible as a text searchable file for quick reference and easy retrieval.

We make it easy to use and convenient for your entire workforce.

On-premise solutions include:

- ▶ **Stream Fax™** (Email-to-Fax and Fax-to-Email) installed to work with your existing email system - receive and send faxes to and from your desktop, saving you time and paper, and giving you easy reference.
- ▶ **Stream Print™** (Print-to-Fax) installed as a printer on individual desktops, allowing users to fax from any application.
- ▶ **Stream Connect™** (Multifunction Device Integration) ties all of your multifunction devices to a centralized communications platform, providing substantial cost savings, security and convenience.

Providing a turnkey solution means we install a high-performance server and software pairing that is scalable, reliable and convenient for your most critical document management needs. After installation, we help you hit the ground running with training to ensure your core staff is up and running using the new Stream Network Fax solution right away – expediting your ROI.

“Though the volume of fax traffic has diminished over the years, the kinds of documents sent over fax servers are, if anything, even more mission-critical than ever. Both in core business processes and in workaday communications, fax has unique characteristics that make it indispensable.”

Gartner, “Fax Lies Amidst Changing Technologies”, February 6, 2008, ID:G00155057

Automate. Send. Receive. Store. Track.

Comply with regulatory standards

Improve productivity and **streamline** processes through automation

Expedite paper-to-paper communications

Maximize your budget and **eliminate cost** of analog fax lines

Improve audit trails and reduce document storage facility costs

Realize a **substantial ROI** of as much as 75% in one year

Easy to use with your existing email, multifunction device and other applications

High-quality faxes - **avoid mistakes** caused by poor image quality
