

Free yourself from the complexities of emerging integration requirements

New and shifting business strategies often require an increasingly agile technology architecture to support them. Initiatives to become more responsive to customers, improve process efficiency to lower cost, or to adopt a new business model compound IT requirements that affect how systems and applications share data, and how that data is managed.

Cleo Managed Services is a subscription service that handles all B2B integration operations, including EDI and managed file transfer processes, within a secure cloud environment. By outsourcing B2B activities to Cleo, internal resources and staff are freed from daily manual integration tasks, allowing them to address other critical initiatives while still having control and visibility over all data moving throughout the business.

Cleo Cloud Architecture

Free yourself from the complexities of emerging integration requirements

Bringing automation to B2B services

Cleo Managed Services subscribers receive a faster, more reliable B2B managed service because our seasoned integration experts fully utilize the automated capabilities of the Cleo Integration Cloud (CIC) within a highly elastic cloud infrastructure. CIC is a complete integration platform used by thousands of customers around the globe to more easily connect and automate the secure exchange of data for all B2B, application, cloud, and big data integration use cases.

Deployed to the Cleo Cloud in less than 24 hours, Cleo's integration services team will begin working closely with you to use CIC to implement best practices for all of your B2B integration requirements that align to your business strategies. Your business will swiftly gain the ability to:

- Manage file transfers with data growth projected to rise 50% year-over-year.
- Meet stringent SLAs — even though file velocity and volume are increasing exponentially.
- Maximize network utilization as bandwidth increases.
- Automate file exchanges between businesses as well as internal systems with complete auditability.
- Move data between data centers that are geographically distributed.
- Address security and speed and still deliver ease of use.

Accelerated EDI and MFT processes

By centralizing all integrations through CIC in the Cleo Cloud, Cleo's services team will enable the accelerated transformation, orchestration, secure communications, movement, and governance of all data moving throughout your organization. Cleo Managed Services utilizes a library of 900 pre-built integration configurations to get you and your partners securely connected and doing business faster with an excess of 99.9% uptime. If your business and IT strategies change, our team can easily adjust and scale B2B operations to meet those new integration requirements.

By partnering with Cleo, your business will receive the very best B2B integration as a service, featuring a "white glove" customer-first experience and 24/7 support. Whether you need to automatically map EDI data or securely move large files quickly and without disruption, Cleo Managed Services adds more value by making your company easier to do business with.

Learn More

Cleo Managed B2B Cloud is a reliable and accelerated B2B-as-a-service that combines decades worth of B2B integration expertise with the automated functionality of a complete end-to-end integration platform hosted on the cloud.

Learn how Cleo Managed B2B Cloud can free yourself from the daily management of complex integration projects without losing control or visibility of all data moving throughout your business.
