

# High Performance EDI Integration for IBM System i

Companies today need integration tools that are reliable and easily manageable to handle their critical business data. Cleo EEI, the only native IBM System i EDI integrator that is 100% supported, provides companies the automation, reporting and performance they need to manage internal and external data transactions.

Cleo EEI includes a rich set of runtime functions and design-time aids, designed to rapidly deploy new trading partners, quickly identify errors, monitor system activity and manage daily operations more efficiently.

---

## What you can do with Cleo EEI

With an easy to use interface, you can create, test and deploy EDI integration processes from beginning to end:

### **Automate EDI processing**

Automatically process X12 and EDIFACT EDI standards 5 times faster than most other solutions on the market.

### **Accelerate EDI translation**

Process high volumes of transactions rapidly, and with low latency.

### **Onboard partners 50x faster**

Easily generate partner definitions and mapping rules from pre-built patterns.

### **Access real-time transaction visibility**

Monitor real-time EDI transactions, and create automated alerts and reports.
